

The Wireless Network gives you a wide variety of ordering options

This is the solution for restaurant owners having problems with unreliable wait staff, staff that are unable to memorize the menu or take wrong orders, operating inefficiently (especially during prime business hours) and want to have an ordering system that is affordable and user friendly.

Functions and Features

1. It is a simple, lightweight handheld terminal (iPhone, iPad mini, iPod touch).
2. Orders are entered just by touching the display
3. On-the-spot transmission of orders to the kitchen
4. Order instructions and customer bills are simultaneously printed out at the kitchen.
5. The system transmits sales data to the headquarters and boss.
6. The order terminal can print out bills to nearest printer.

Post-Installation Advantages

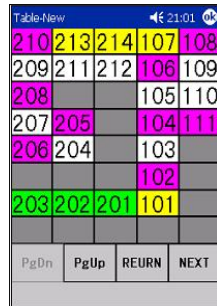

1. The elimination of hand written orders achieves accurate and expedited ordering.
2. The system achieves a drastic improvement in the communication between your wait staff and kitchen; eg. reduction in wrong orders and wait staff traveling to the kitchen.
3. The swift and easy processing of orders generates a confidence among your wait staff leaving them to concentrate on serving your guests.
